SUMMARY

I'm a Full-Stack Web Developer with experience building modern web applications using Next.js, React, TypeScript, Express.js, PostgreSQL, Prisma, and Tailwind CSS. Experienced in developing responsive frontends and designing scalable backend systems with REST APIs. Familiar with system design concepts such as CDNs, Redis, object storage, load balancing, rate limiting, and caching, with a strong interest in building reliable and scalable SaaS applications.

PROJECTS

BackIt — Crowdfunding Launch Platform

[Live](#) [Github](#)

- Built a full-stack crowdfunding platform enabling creators to launch fundraising campaigns and connect with backers, using Next.js (App Router), TypeScript, and Prisma ORM
- Implemented core features including user authentication, campaign creation with funding goals and milestones, real-time progress tracking, and a public listings/discovery page
- Designed a responsive, theme-aware UI (light/dark mode) with reusable component architecture (shadcn/ui) and route protection via Next.js middleware

Rize Plus — AI Resume Roaster

[Live](#) [Github](#)

- Built an AI-powered web app that lets users upload their resume and receive an instant, critique ("roast") highlighting weaknesses and improvement areas
- Developed the frontend with Next.js and TypeScript, using a drag-and-drop file upload interface and Tailwind-based styling for a clean, minimal UX

Listform — No-Code Feedback Widget Platform

[Live](#) [Github](#)

- Designed and built the marketing/landing page for a SaaS product that lets founders embed feedback, bug-report, survey/NPS, and waitlist widgets on any website via a single script tag
- Architected the app as a Turborepo monorepo with Next.js, TypeScript, and a shared shadcn/ui component package, enabling code reuse across the marketing site and embeddable widgets

Echo — Customer Support Platform

[Live](#) [Github](#)

- Built a customer support inbox tool that lets teams manage and respond to customer conversations from a centralized dashboard
- Architected the app as a Turborepo monorepo with Next.js, TypeScript, and a shared shadcn/ui component package for consistent, reusable UI across the app
- Implemented secure user authentication and session management using Clerk, protecting the conversations dashboard behind sign-in

EXPERIENCE

Full Stack Development Intern

Betterstacks – 3 months

- Implemented the AI resume roaster feature end-to-end and built an analytics dashboard so users could track usage and engagement with their roasted resumes
- Built a QR code generator tied to user profiles and an AI-powered voice calling system that automatically captures user details over a call and populates their profile — removing the need for manual data entry
- Fixed and improved frontend UI across the platform, resolving layout/responsiveness issues and polishing existing components for a smoother user experience
